

# 1.A.4.c iii - Agriculture/Forestry/Fishing: National Fishing

## Short description

In NFR sub-category 1.A.4.c *iii* fuel consumption and emissions of Germany's maritime fishing fleet are reported.

Method	AD	EF	Key Category Analysis
T1, T2	NS, M	D, M, CS, T1, T2	<i>no key category</i>

## Methodology

### Activity Data

Primary fuel delivery data for national fishing is included in NEB lines 6 ('International Deep-Sea Bunkers') and 64 ('Coastal and Inland Navigation') for IMO-registered and unregistered ships respectively.

The actual annual amounts used are therefore calculated within (Deichnik (2019)), where ship movement data (AIS signal) allows for a bottom-up approach providing the needed differentiation.<sup>1)</sup>

Table 1: Annual fuel consumption, in terajoules

	1990	1995	2000	2005	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019
<b>Diesel oil</b>	711	549	531	488	473	442	431	429	472	555	1.117	1.208	2.529	512
<b>Heavy fuel oil</b>	23,7	18,1	17,7	16,1	15,6	14,6	14,2	14,1	13,4	NO	NO	NO	NO	NO
<b>Σ 1.A.4.c iii</b>	<b>735</b>	<b>567</b>	<b>549</b>	<b>504</b>	<b>489</b>	<b>456</b>	<b>445</b>	<b>443</b>	<b>485</b>	<b>555</b>	<b>1.117</b>	<b>1.208</b>	<b>2.529</b>	<b>512</b>

The strong increase after 2015 cannot be conclusively explained at the moment. However, even if the over-all fuel quantities delivered to the navigation sector would be somehow misallocated between the specific nautical activities, there would be no over- or under-estimation of over-all emissions.

### Emission factors

The emission factors applied here, are derived from different sources and therefore are of very different quality.

For the main pollutants, country-specific implied values are used, that are based on tier3 EF included in the BSH model <sup>2)</sup> which mainly relate on values from the EMEP/EEA guidebook 2016 <sup>3)</sup>. These modelled IEFs take into account the ship specific information derived from AIS data as well as the mix of fuel-qualities applied depending on the type of ship and the current state of activity.

Table 2: Annual country-specific emission factors, in kg/TJ

	1990	1995	2000	2005	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019

<sup>1</sup> ratios PM<sub>2.5</sub> : PM<sub>10</sub> : TSP derived from the tier1 default EF as provided in <sup>4)</sup> <sup>2</sup> estimated from f-BCs as provided in <sup>5)</sup>: f-BC (HFO) = 0.12, f-BC (MDO/MGO) = 0.31 as provided in <sup>6)</sup>, chapter: 1.A.3.d.i, 1.A.3.d.ii, 1.A.4.c.iii Navigation, Table 3-2 and Table A1 - BC fractions of PM emissions from relevant studies

**NOTE:** For the country-specific emission factors applied for particulate matter, no clear indication is available, whether or not condensables are included.

For information on the **emission factors for heavy-metal and POP exhaust emissions**, please refer to [Appendix 2.3 - Heavy Metal \(HM\) exhaust emissions from mobile sources](#)] and [Appendix 2.4 - Persistent Organic Pollutant \(POP\) exhaust emissions from mobile sources](#) ].

## Trend discussion for Key Sources

**NFR 1.A.4.c iii - National Fishing** is no key source.

## Recalculations

Recalculations occur only to the revised **activity data** reported for 2016 and 2017. Here, due to a revision of the official blending rates, the amounts of biodiesel used in NFR 1.A.4.c iii have been revised for 2016 and 2017.

Table 3: Revised biodiesel consumption estimates, in terajoules

	1990	1995	2000	2005	2010	2011	2012	2013	2014	2015	2016	2017	2018

All **emission factors** remain unrevised, instead.

For pollutant-specific information on recalculated emission estimates for Base Year and 2018, please see the pollutant specific recalculation tables following [chapter 8.1 - Recalculations](#).

## Uncertainties

Uncertainty estimates for **emission factors** were adopted from NFR 1.A.3.d i as a comparable emission source.

## Planned improvements

Besides a routine revision of the BSH model, further focus will be put on the correct allocation of activity data to the different navigation activities covered in different NFR sub-sectors.
