Methodology

Activity data

Specific data for gasoline evaporation from road vehicles are generated within TREMOD [1)]. - The following table provides an overview of annual amounts of gasoline evaported from road vehicles in Germany.

(Implied) Emission factors

Tier3 emission factors representing the effect of mitigation technologies are derived from TREMOD (Knörr et al., 2019a) [3)].

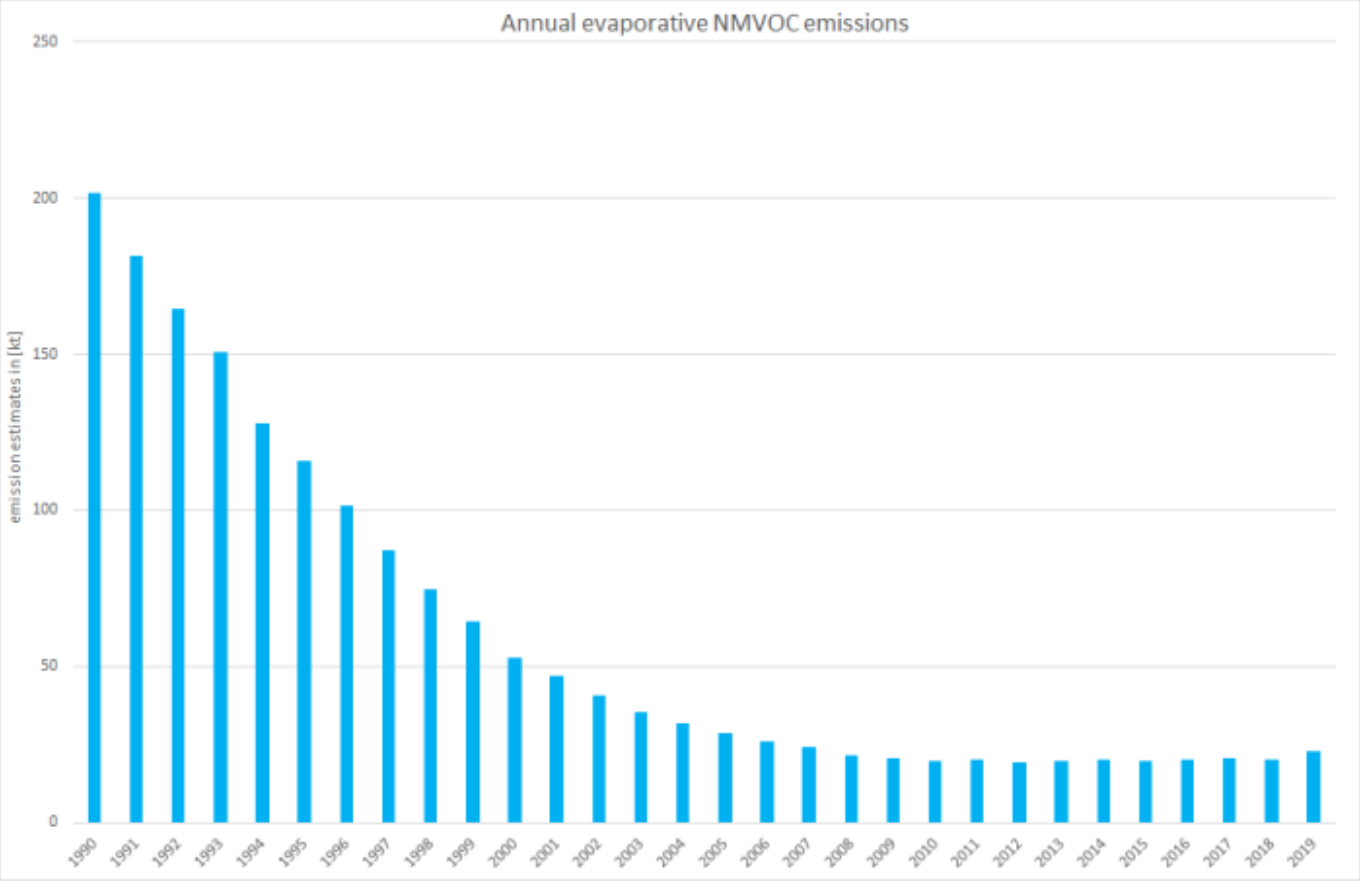
Discussion of emission trends

> **NFR 1.A.3.b v - Gasoline evaporation** is key category for emissions of **NMVOC** regarding the emissions' level and declining trend.

++ Non-Methane Volatile Organic Compounds - NMVOC *(fugitive emissions only; no NMVOC emissions from fuel combustion included)*



Since its maximum level of over 11,000 kilotonnes in 1990, the amount of evaporated gasoline is decreasing - and so are the related NMVOC emissions. The amounts of evaporated gasoline are connected directly with those of gasoline consumed. Here, the decrease becomes sharper from 2000 onwards following a growing switch from gasoline to diesel oil especially in passenger cars. Here, the annual amounts of NMVOC emissions from evaporation not only depend directly on the amount of evaporated gasoline but also on the number of vehicles equipped with mitigation technologies. Thus, the decrease is sharpest straight after 1990 and since then slowing down.

> **NOTE:** Due to defectively revised emission factors, the **emission estimates** provided in the NFR tables **are incorrect until 1993**. Here, the EFs for 1990 to 1993 have not been adapted to the revised values for all years as of 1994. As it is not possible to provide an artificially corretected chart for the *emission estimates*, the chart from submission 2014 is included to at least display the correct trend in emissions. - **However, the described erronous EFs will be corrected with the next TREMOD routine revision and the NEC and CLRTAP submissions 2018.**

Recalculations

Due to a broad revision of the TREMOD model carried out to keep in line with the new HBEFA 4.1, **activity data** and **emission factors** have been checked and **revised for all years**.

Table 3: Revised annual amounts of evaporated gasoline, in kilotonnes

	1990	1995	2000	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018

In addition, the NMVOC **emission factors** applied were revised for all years. However, this revision can only be displayed for the implied emission factors:

As a result, **NMVOC emissions from gasoline evaporation** were re-estimated as follows:

For specific information on recalculated emission estimates for Base Year and 2018, please see the pollutant specific recalculation tables following chapter 8.1 - Recalculations.

Planned improvements

Besides a routine revision of the underlying model, no specific improvements are planned.
