## **Appendix 2.1 - Reporting of PM emissions**

Table A2.1: Inclusion/exclusion of the condensable component from PM<sub>10</sub> and PM<sub>2.5</sub> emission factors

NFR categories with no reported activity or PM emissions (notation keys 'NO' or 'NA' in the NFR tables) are excluded here.)

The condensable fraction of particulate matter (PM 2.5) is documented for all source groups in the emissions database ("Central Emissions System") of the German Environmental Agency. A documentation entry has been created for each source group, indicating the following options for condensable particulate matter (PM 2.5):

- The documentation for the condensable fraction for PM 2.5 is not available (documentation N/A)
- Yes (measured/determined) The condensable fraction for PM 2.5 was measured or determined
- NA (no condensable PM 2.5 is generated in the process) Therefore not applicable (NA)
- No (but potentially possible)
- Unknown The condensable fraction for PM 2.5 is unknown

Below is an excerpt from the current Central System Emissions, showing the aforementioned documentation entries for each source group.

| Source<br>group |  | Documentation<br>not available | Yes<br>(measured/determined) | Not<br>Applicable<br>(no<br>condensable<br>PM 2.5 are<br>generated<br>in the<br>process) | No<br>(potentially<br>possible) | Unknown | Number<br>of<br>document<br>entries |
