# 2.B.3 - Adipic Acid Production

## **Short description**

In NFR 2.B.3,  $NO_x$  and CO emissions from the production of adipic acid are reported. As there are only three producers of adipic acid data provided by them has to be treated as confidential. Due to that only emissions could be reported.

#### Method

As this source category is a key category for  $N_2O$ , plant specific activity data are applied here according to the IPCC guidelines. These data are made available basically via a co-operation agreement with the adipic acid producers. A single data Collection of plant specific  $NO_x$  and CO emissions and related emission factors of one year (2016) was sufficient as the emissions are below the threshold of significance. The emission factors are applied to the whole time series for every plant.

## Recalculations

No recalculation activities were necessary.

#### **Planned improvements**

No category-specific improvements are planned.
