2.B.3 - Adipic Acid Production

Short description

In source category NFR 2.B.3 - adipic acid production NO_x and CO emissions from the production of adipic acid are reported. As there are only three producers of adipic acid data provided by them has to be treated as confidential. Due to that only emissions could be reported.

Method

PS Plant Specific data

As this source category is a key category for N_2O , plant specific activity data are applied here according to the IPCC guidelines. These data are made available basically via a co-operation agreement with the adipic acid producers. A single data Collection of plant specific NO_x and CO emissions and related emission factors of one year (2016) was sufficent as the emissions are below the threshold of significance. The emission factors are applied to the whole time series for every plant.

Recalculations

No recalculation activities were necessary.

Planned improvements

No category-specific improvements are planned.
