2.B.3 - Adipic Acid Production

Short description

In source category *NFR 2.B.3 - adipic acid production* NO_x and CO emissions from the production of adipic acid are reported. As there are only three producers of adipic acid, data provided by them has to be treated as confidential. Due to this reason, only emissions could be reported.

Category Code	Method				AD				EF					
2.B.3	T3				PS				C

T = key source by Trend **L** = key source by Level

Methods	
D	Default
RA	Reference Approach
T1	Tier 1 / Simple Methodology *
T2	Tier 2*
T3	Tier 3 / Detailed Methodology *
C	CORINAIR
CS	Country Specific
M	Model

* as described in the EMEP/CORINAIR Emission Inventory Guidebook - 2007, in the group specific chapters.

AD - Data Source for Activity Data	
NS	National Statistics
RS	Regional Statistics
IS	International Statistics
PS	Plant Specific data
AS	Associations, business organisations
Q	specific questionnaires, surveys

EF - Emission Factors	
D	Default (EMEP Guidebook)
C	Confidential
CS	Country Specific
PS	Plant Specific data

Method

As this source category is a key category for N_2O, plant specific activity data is applied here according to the IPCC guidelines. This data is made available basically via a co-operation agreement with the adipic acid producers. A single data collection of plant specific NO_x and CO emissions and related emission factors of one year (2016) was sufficient as the emissions are below the threshold of significance. These emission factors are applied to the whole time series for every plant.

Activity Data

Due to confidentiality concerns, this data is not made public (see short description).

Emission factors

Due to confidentiality concerns, this data is not made public (see short description).

Recalculations

No recalculation activities were necessary.

Planned improvements

No category-specific improvements are planned.
