In Germany, soda ash is produced in three production facilities, all of which use the Solvay process. The production data is thus confidential.

# Method

### Activity data

The Federal Statistical Office determines the total amounts of soda ash produced in Germany, but only in a way that respects confidentiality.

### **Emission factor**

Emission factors (for TSP and NH<sub>3</sub>) are confidential due to restrictions on activity data.

### **Discussion of emission trends**

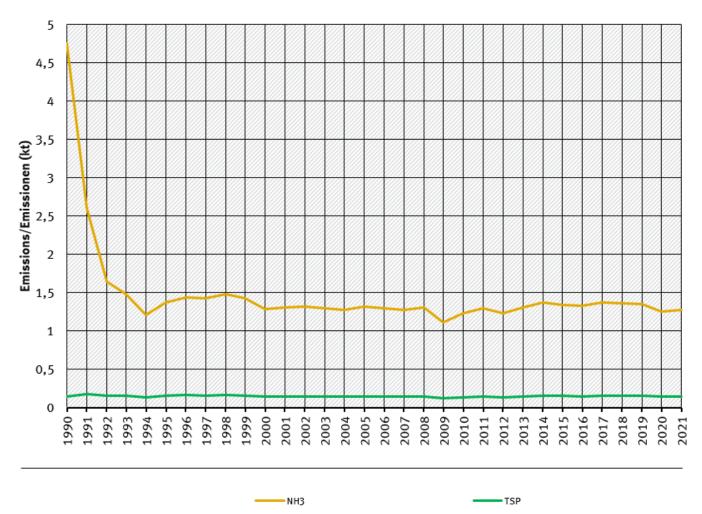

The steep reduction—especially for NH<sub>3</sub>—at the beginning of the 1990s was due to closures in the eastern German industrial

sector. For the year 1990 in the case of TSP for eastern Germany, a summary figure is reported for the Chemical Industry as a whole. However, after 1992, emissions of  $NH_3$  occur at a lower level.

All trends in emissions correspond to trends of emission factors. No rising trends are to identify.

## trends of emissions of Soda Ash Production

#### Emissions by pollutant / Emissionen nach Schadstoff

\* Base Year for PM = 1995 / Basisjahr für Feinstäube (PM) ist 1995

Source: German Emission Inventory (20.01.2023)

#### **Emission trends in NFR 2.B.7**

#### Recalculations

With EF and AD remaining unrevised, recalculations were not necessary.

For pollutant-specific information on recalculated emission estimates for Base Year and 2019, please see the pollutant specific recalculation tables following chapter 8.1 - Recalculations.

#### **Planned improvements**

AD improvements are planned by using production figures of both german producers.
