

2.C.5 - Lead Production

Short description

Within this NFR subcategory, SO₂, PM_{2.5}, PM₁₀, TSP, As, Cd, Cu, Hg, Pb, Zn, PCB and PCDD/F emissions from the production of lead are reported.

Method

Activity data

The yearly production figures were taken from the annual statistical report of the German association for non-ferrous metals [\[Lit. 1\]](#).

Emission factors

The emission factors are either default values according to the 2019 EMEP/EEA air pollutant emission inventory guidebook [\[Lit. 2\]](#) or determined in several research projects. For heavy metals (HM), the applied emission factors are derived from a research project [\[Lit. 3\]](#). All emission factors have a decreasing trend except SO_x that is supposed to be constant.

Recalculations

With activity data and emission factors remaining unrevised, no recalculations were carried out compared to Submission 2022.

For **pollutant-specific information on recalculated emission estimates for Base Year and 2020**, please see the pollutant specific recalculation tables following [chapter 8.1 - Recalculations](#).

Planned improvements

No category-specific improvements are planned.
