

## Appendix 2.1 - Reporting of PM emissions

Table A2.1: Documentation entries of the Central System Emissions database for the condensable fraction of PM<sub>2.5</sub>

NFR categories with no reported activity or PM emissions (notation keys 'NO' or 'NA' in the NFR tables) are excluded here.)

The condensable fraction of particulate matter (PM<sub>2.5</sub>) is documented for all source groups in the emissions database ("Central Emissions System") of the German Environmental Agency. A documentation entry has been created for each source group, indicating the following options for condensable particulate matter (PM<sub>2.5</sub>):

- The documentation for the condensable fraction for PM<sub>2.5</sub> is not available (documentation N/A)
- Yes (measured/determined) – The condensable fraction for PM<sub>2.5</sub> was measured or determined
- NA (no condensable PM<sub>2.5</sub> is generated in the process) – Therefore not applicable (NA)
- No (but potentially possible)
- Unknown – The condensable fraction for PM<sub>2.5</sub> is unknown

Below is an excerpt from the current Central System Emissions, showing the aforementioned documentation entries for each source group.

NFR Source Category		Documentation not available	Yes (measured/determined)	Not Applicable (no condensable PM <sub>2.5</sub> are generated in the process)	No (potentially possible)	Unknown	Number of document entries
