

Explanation of Key Trends - Fine Particulate Matter (PM₁₀)

Main drivers

Between 1995 and 2019 the **total PM₁₀ emissions** dropped 41.2%. The Main Drivers for PM₁₀ emissions are **Fuel Combustion (NFR 1.A)** with 48% of total 1995 emissions and a 57% reduction between 1995-2019 and as a sum the **Industrial Processes (NFR 2)** (and especially **Handling of Bulk Products NFR 2.L** therein) with 39% of total 1995 emissions and a 33% reduction between 1995-2019.

Within NFR 1.A, **Transport (NFR 1.A.3)** produces the biggest part of PM₁₀ emissions. Here, about 75% of 2019 Transport PM₁₀ emissions are produced by **Road Transport (NFR 1.A.3.b)**, half of which is directly caused by **fuel combustion (NFR 1.A.3.b.i - iv)** and the other half by **road abrasion and tyre and brake wear (NFR 1.A.3.b.vi - vii)**.

PM₁₀ Emissions 1990-2019
