This industrial sector essentially includes the production of chipboards. It's of minor meaning with view on emissions.

Chipboards are made from wood chips with added binders under the influence of pressure and heat. The main source of NMVOC emissions are the wood chips used, from which NMVOCs are emitted during drying due to the effect of heat. NMVOC can also be emitted from wood and binder during the pressing process.

Chipboards are produced in about 20 plants in Germany with the industrial sector being dominated by few larger companies.

### Activity data

The activity data are taken from the national statistics <sup>1)</sup>, but must be converted from volume to mass data for further use.

Table 1: Produced amounts, in 10<sup>6</sup> metric tonnes [t]

2015	2016	2017	2018	2019	2020	2021	2022	2023
4.402	4.56	4.703	4.322	4.489	4.431	4.776	4.366	4.059

## Emissions factors

The emission factors of 0.9 kg/t for NMVOC and 0.3 kg/t for PM were estimated on the basis of expert judgements.

## Recalculations

With **activity data and emission factors remaining unrevised**, no recalculations were carried out compared to the previous submission.
