## Road Transport

For PAH exhaust emissions, the tier2 emission factors as provided in the 2023 EMEP/EEA Guidebook in chapter 1.A.3.b (Update 2024), tables 3-18 to 3-26 have been implemented with the current submission, upgrading the estimation from a tier1- to a tier2-approach.

Due to this improvement, the reported emissions especially for Benzo[a]Pyrene and, hence, the sum for PAH 1-4 increased rather strongly, by about %and % respectively, whereas the amounts of B[b]F, B[k]F, and I[123cd]P increased only slightly.

Regarding PCDD/F, a tier1 EF from (Rentz et al., 2008) <sup>1)</sup> is used instead.

## Aircraft in 1.A.3.a and 1.A.5.b ii

The EMEP/EEA GB 2016 (July 2017) does not provide specific defaults for POP emissions from the combustion of jet kerosene and aviation gasoline, stating that for for aviation gasoline these emissions are *not estimated* (NE):

Therefore, the inventory compiler decided to apply the tier1 EF for **PAHs** from gasoline fuel used in non-road mobile machinery here, too. Furthermore, both **HCB** and **PCBs** emissions are stated as *not applicable* in <sup>14)</sup>, chapter 1.A.3.a, 1.A.5.b Aviation, Table 3.3 Tier 1 emission factors for NFR 1.A.3.a.ii.(i): Civil aviation (domestic, LTO).

As the Party assumes that POP emissions from the combustion of jet kerosene are unlikely to occur, these emission are reported as *not applicable* (NA).
