CHAPTER 9.1 - Recalculations

Generally, improvement of the emission inventory is an ongoing task and triggers recalculations for all source categories and pollutants frequently.

Further information regarding recalculations (especially due to changes in methods or activity data) can be found in the corresponding chapters of the **National Inventory Document 2026** (NID 2026) ¹⁾.

Possible reasons for Recalculations

Due to the ever ongoing efforts to improve the inventory, more or less broad recalculations become necessary with each new submission.

Possible reasons for recalculations are

- **new** (sub-)categories to be included in the inventory or re-allocation of existing sub-categories within the inventory
- **data** (activity data & emission factors) for certain (sub-)categories **available for the first time**
- **change of data sources** (for activity data and emissions)
- use of **new emission factors** (due to: inquest, research projects, expert judgement etc.)
- **improvement of methods** used for calculating emissions
- **outcome of ongoing review** activities under both UN FCCC and UN ECE
- etc.

All these changes can effect *specific years* of the inventory as well as the *entire time series*, leading to more or less significant changes within the emission trends.

Declaration of Recalculations

Under UN FCCC reporting, parties have to comment any recalculations in any year leading to differences between latest and current submission for a given year or the time period or series. Thereby, highest attention is given to recalculations within

base year and the most current year of the latest submission:

Recalculations in Base Year data

- mostly rather small but of highest importance
- mostly due to changed methods or emission factors used for entire time series
- impact on basis of any evaluation

Recalculations in data of current year of the latest submission

- mostly because of **corrected activity data** (especially in Energy Production) from finalized Energy Balances
- also due to changed methods, emission factors, or data sources used
- impact on the amount of emission reduction reported in latest submission

Under UN ECE, within the IIR, Germany focusses on recalculations in values reported for **1990** for all MAIN POLLUTANTS, HEAVY METALS and POPS, **1995** for PM_{2.5} and PM₁₀ and **2000** for BLACK CARBON (BC), and the **last year of the previous submission**, providing the **quantity** (in absolute numbers and in %) of change for any recalculated emission **and the reasons** for the recalculations carried out

Recalculations in current submission

Table 1: Overview of impact of recalculations on the level of National Totals (For more detailed information please mouseclick the pollutant.)

Overview of reasons for recalculations against Submission 2025

(main changes only, without claim to completeness)

1. revision of (primary) activity data

- 1.A together with 2.C.1: routine revision of National Energy Balances 2003 to 2022 ²⁾ & finalisation of National Energy Balance 2023 ³⁾

2. update or revision of entire model

- 1.A.3.a: routine revision of TREMOD Aviation (TREMODO AV) ⁴⁾
- 1.A.3.b: routine revision of TREMOD ⁵⁾
- 1.A.2.g vii, 1.A.4.a ii, 1.A.4.b ii and 1.A.4.c ii: routine revision of TREMOD Mobile Machinery (TREMODO MM) ⁶⁾
- 1.A.3.d: routine revision of E.M.M.A. model maintained by BSH ⁷⁾

3. newly implemented activity and/or emission factors

- 2.B.10.b: newly implemented AD and EF based on available results from research project on VOC
- 2.C.3: newly implemented EF for B[b]F, B[k]F and I[x]P, also resulting in a strong increase of PAH1-4 emission
- 2.D.3.c: newly implemented EF for PM (GB Default)

4. revision of emission factors

- 1.A.3.b v i & v ii: update to emission factor information as provided in the 2025 Update release of Chapter 1.A.3.b v i & v ii of the EMEP/EEA Guidebook 2023 ⁸⁾
- 5.C.1.b v: use of 2023 EMEP/EEA Guidebook default-EF for Pb and Cd

5. re-allocation of activity data and/or emissions

- -

6. as an outcome of the ongoing review activities under both UNFCCC and UNECE

- 2.D.3.c: newly implemented EF for PM (GB Default)
